

Hackathon Vicaima

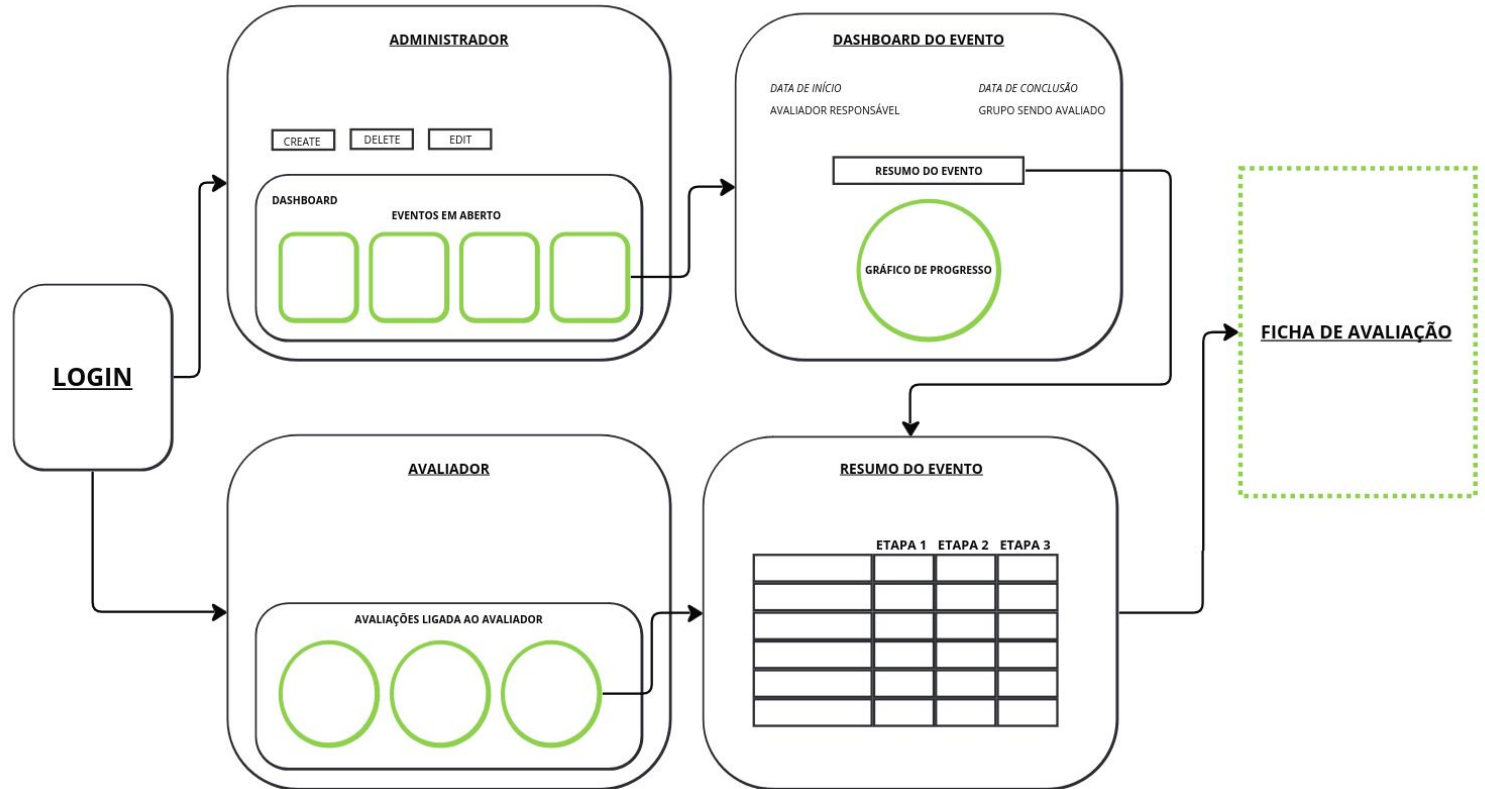

The objective

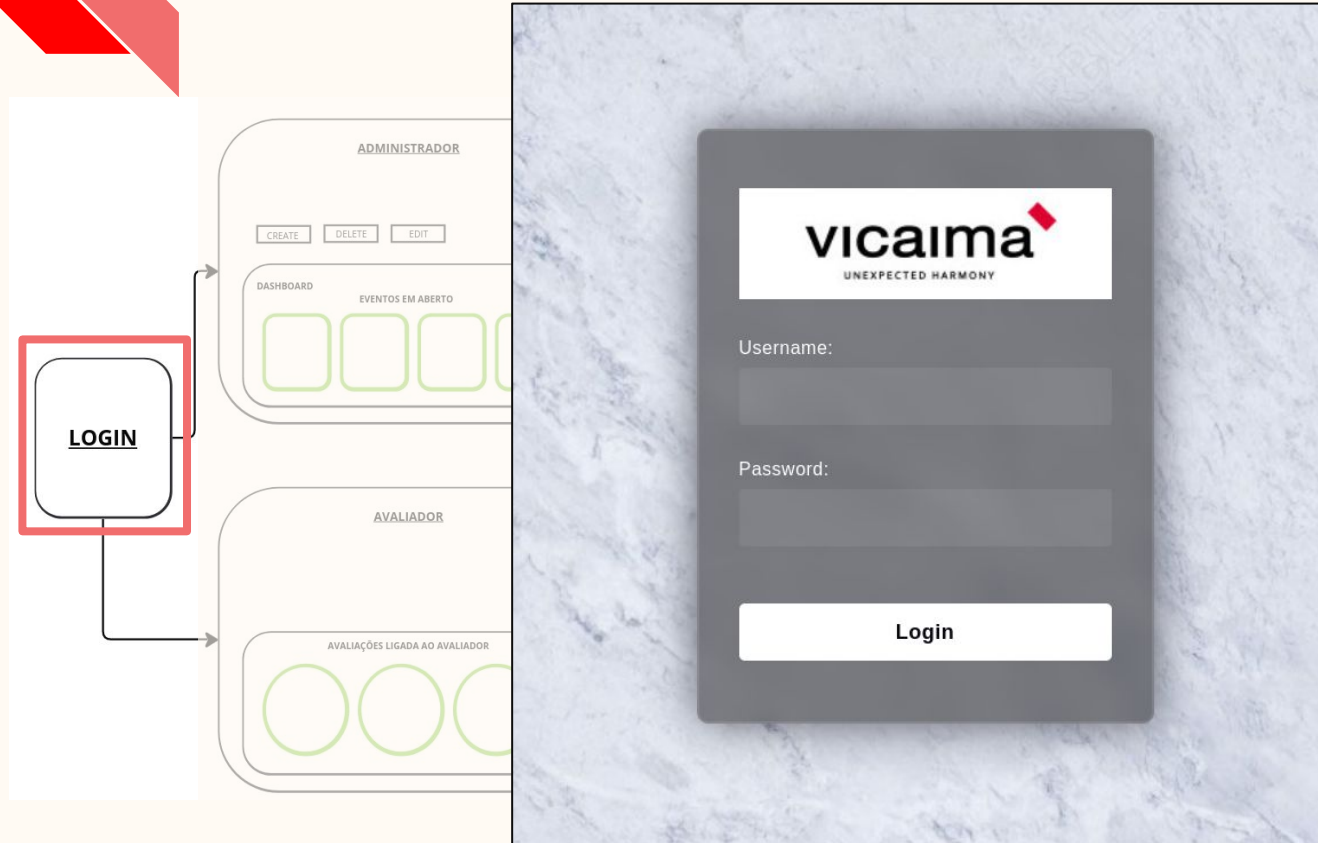

- Create an online application to monitor data collection related to performance evaluation
- Convert a mostly manual task into a more automatic process

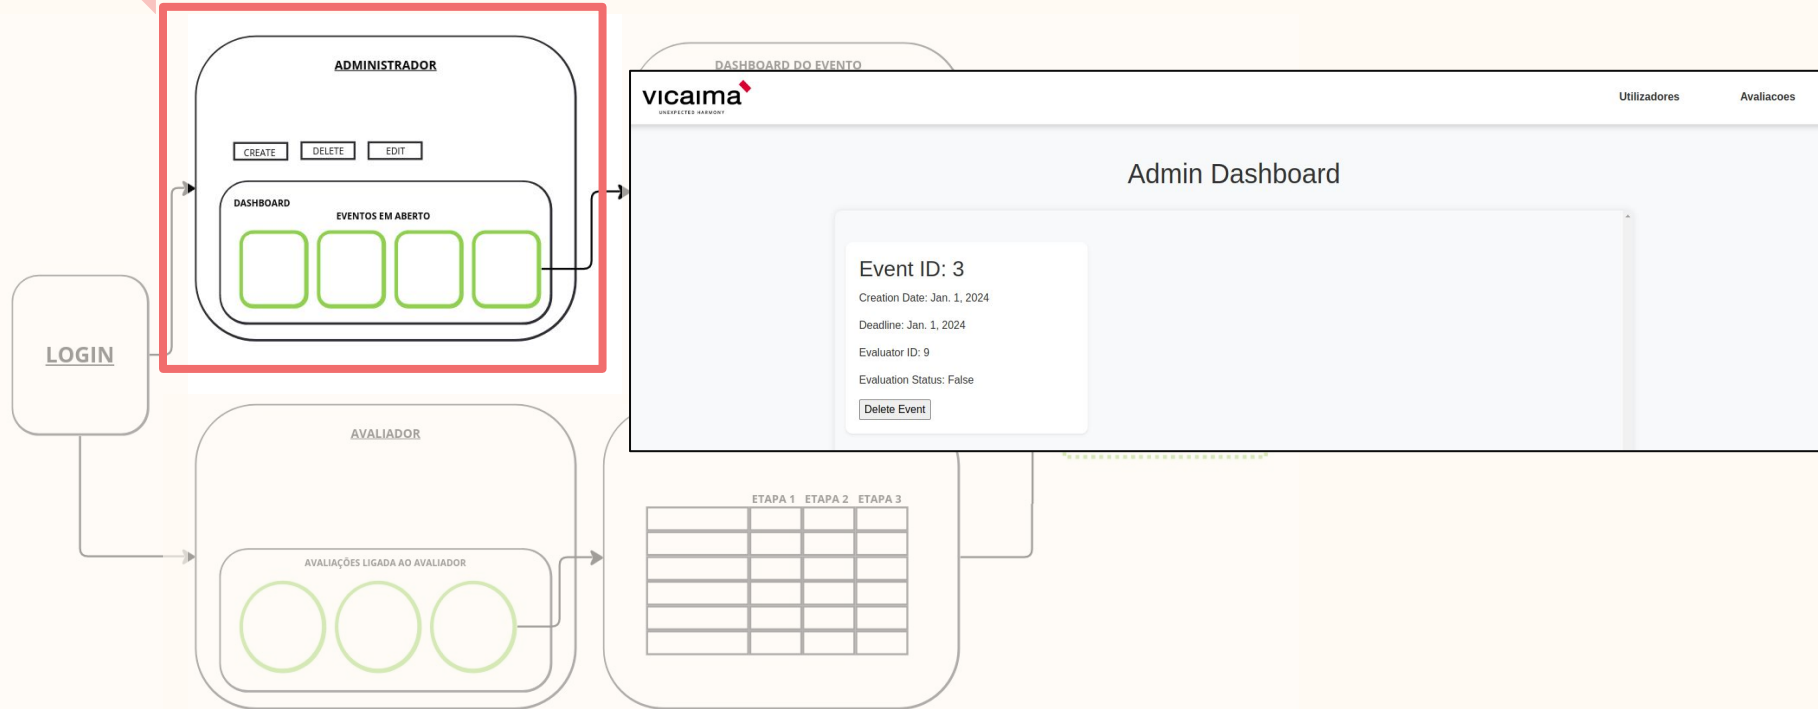

Our vision

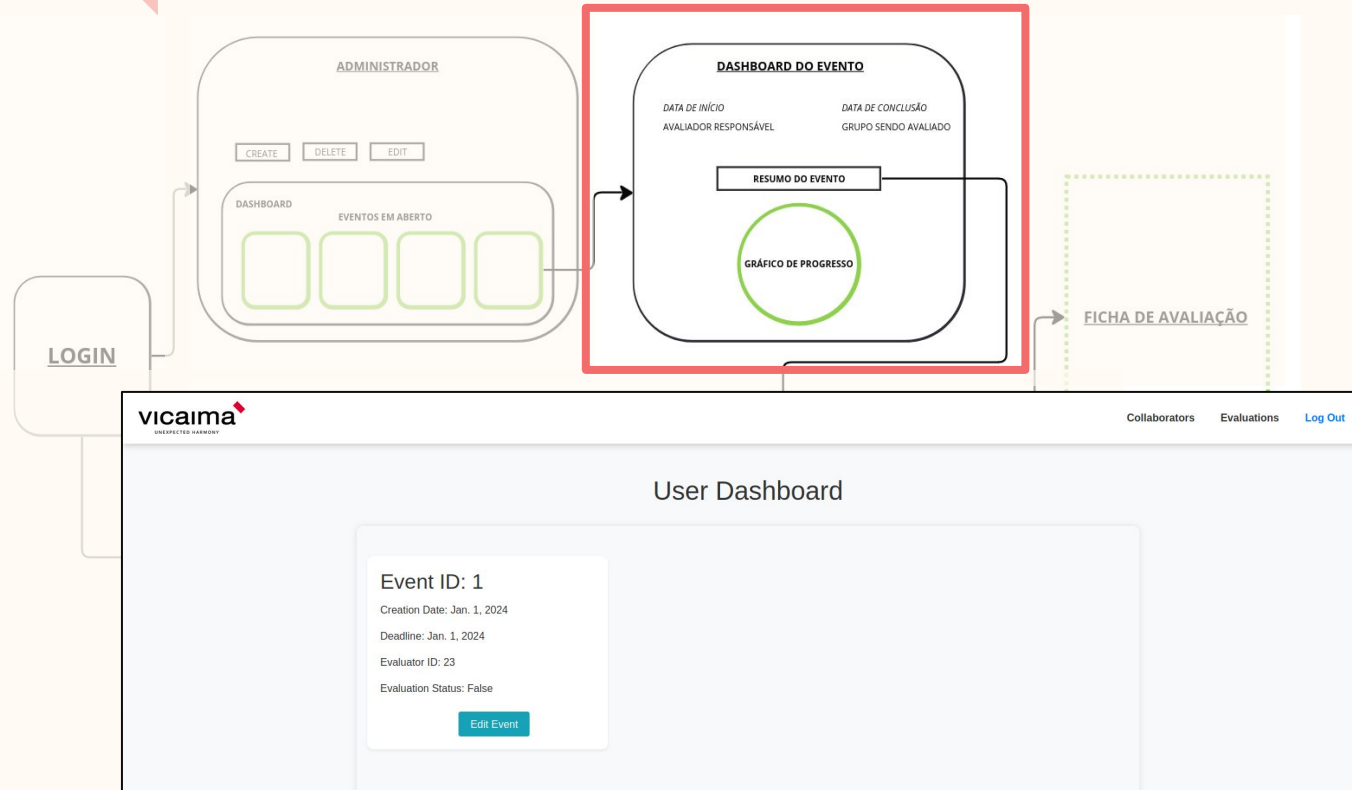

Implementation

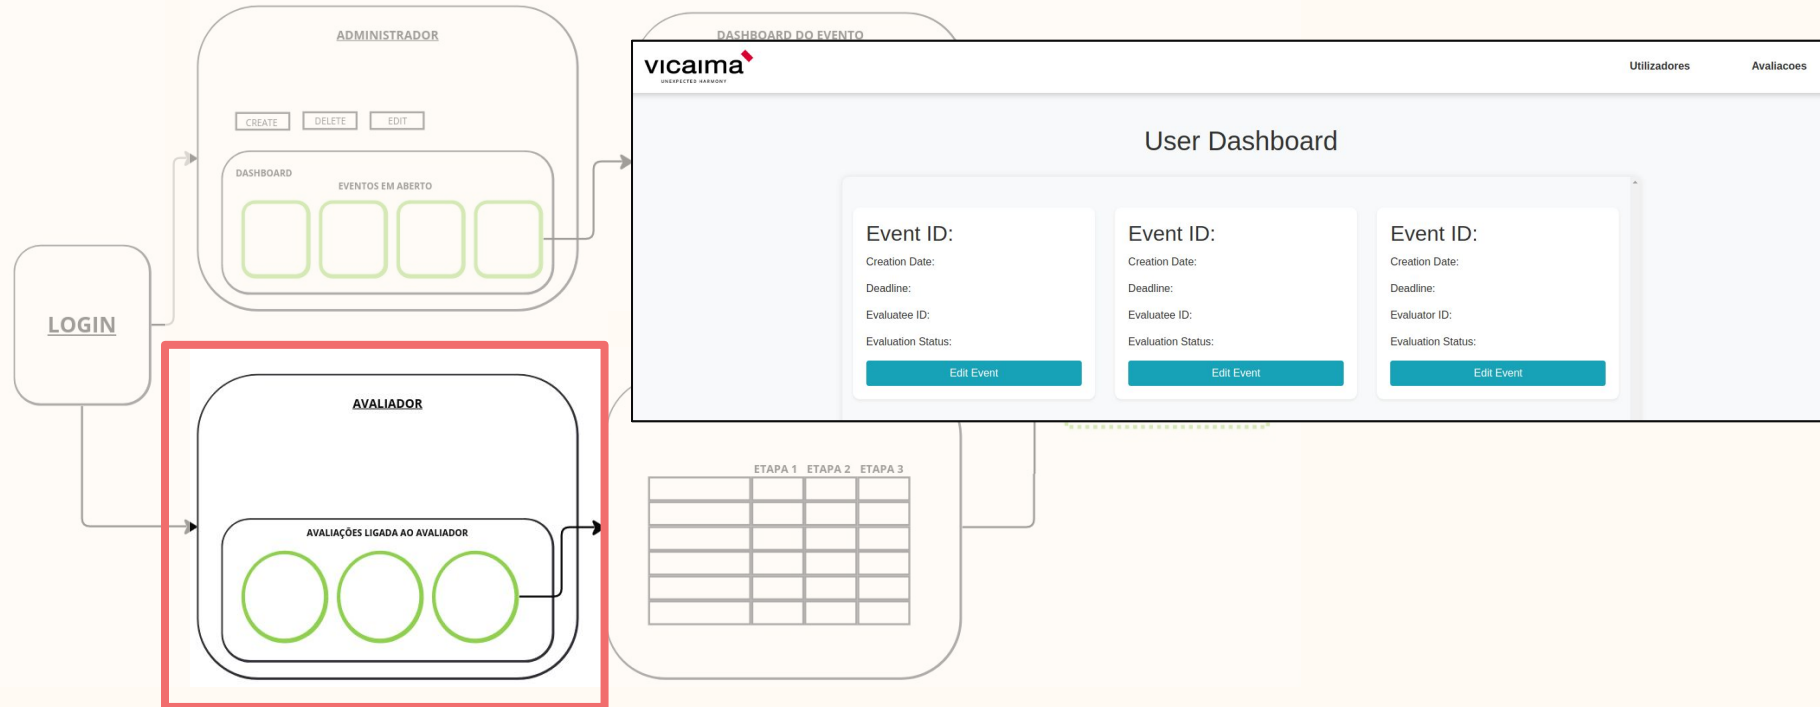

Implementation

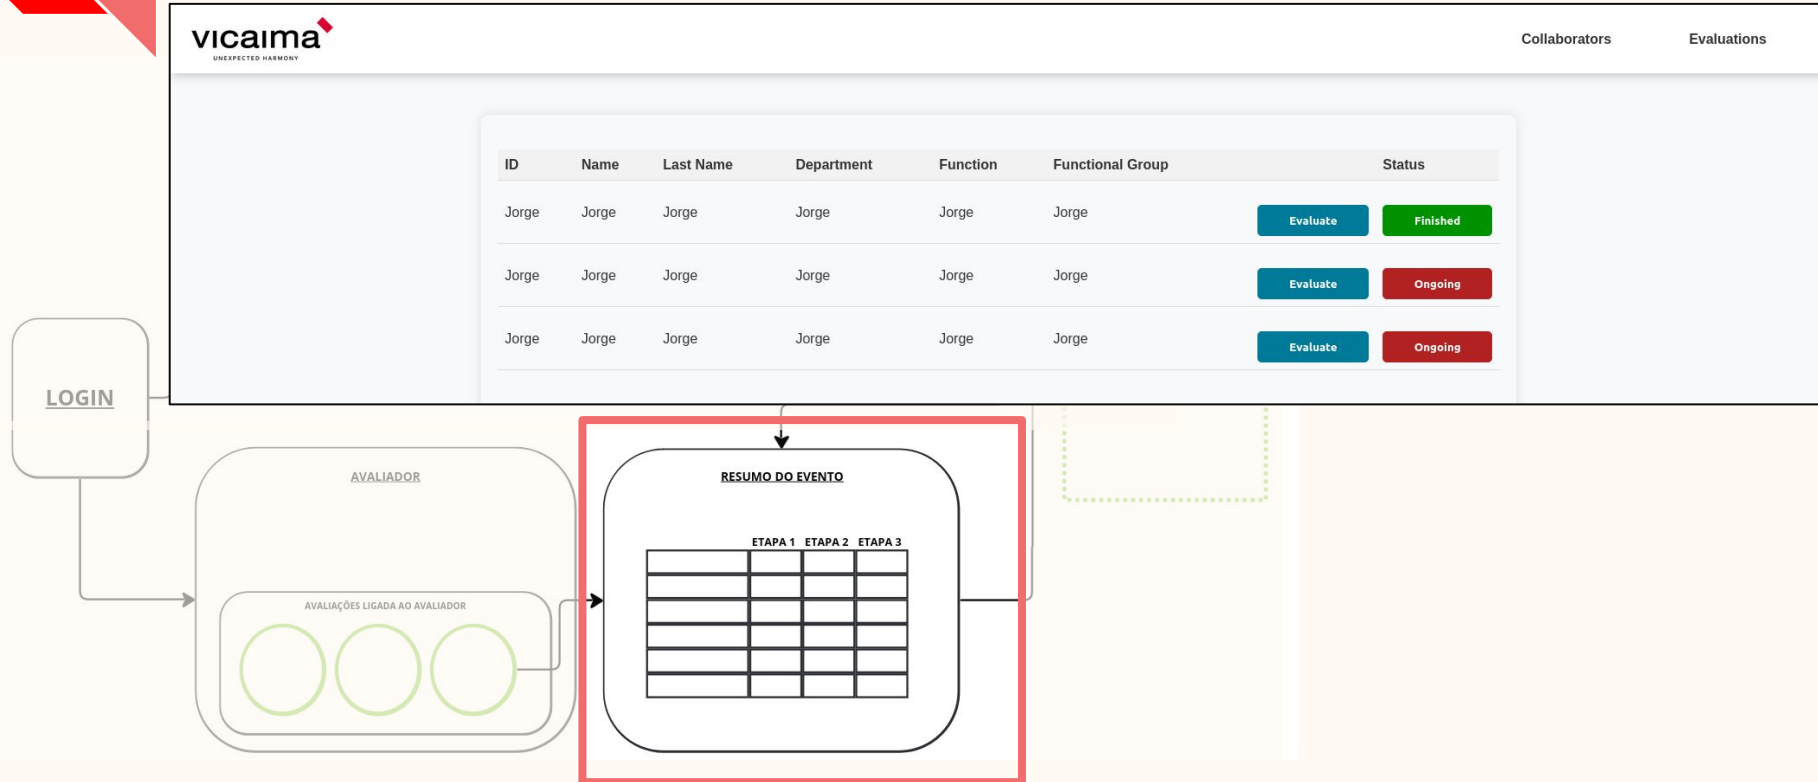

Implementation

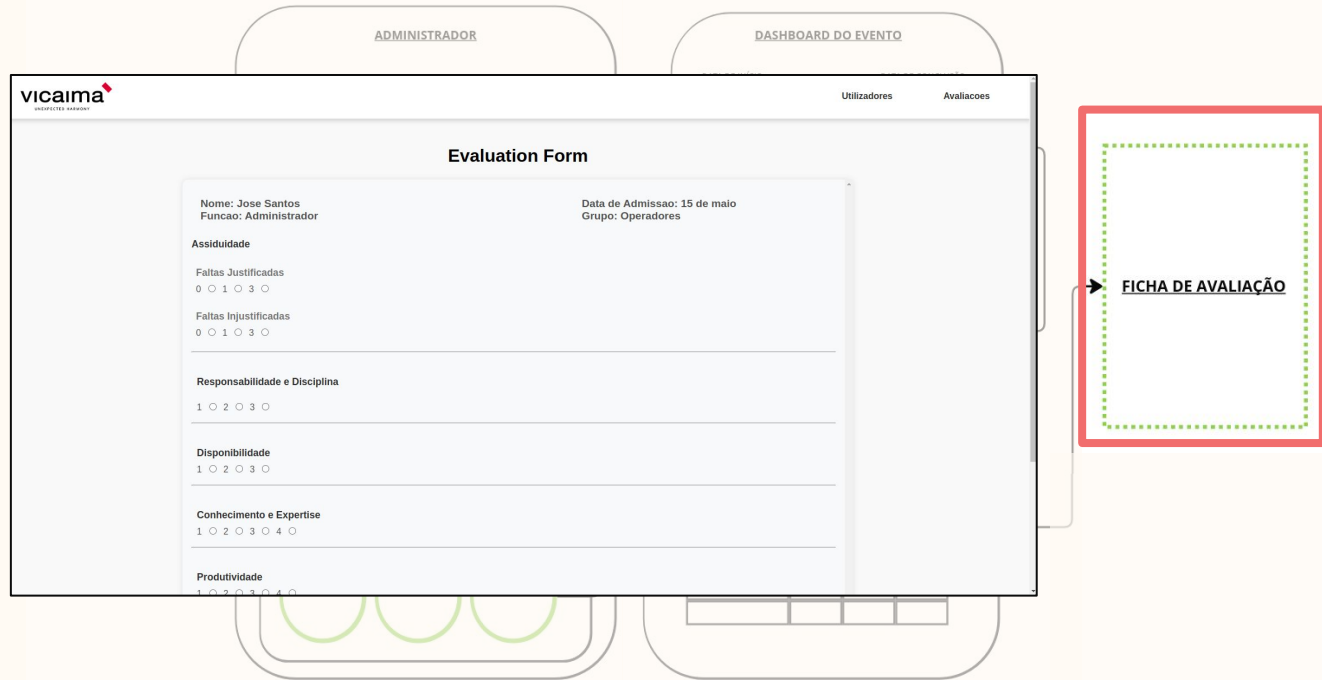

Implementation

Key Additional Features

- Possibility to add collaborator

The screenshot shows a web interface for 'vicaima' with a top navigation bar containing 'Utilizadores' and 'Auditorios'. A modal window titled 'Add Collaborator' is centered on the screen. The form contains the following fields: 'Name', 'Last name', 'Department', 'Function', 'Admission date' (with a date picker set to 26/04/2024), 'Functional group', and 'Nickname'. At the bottom of the modal is an 'Add entry' button.

- Possibility to add from CSV

The screenshot shows a web interface for 'vicaima' with a top navigation bar containing 'Collaborators', 'Evaluations', and 'Log Out'. The main area is titled 'Upload CSV File'. It features a 'Browse...' button next to the text 'File: No file selected.', and an 'Upload' button below it.

Roadmap

- Develop the application using cookies (persistent session)
- Editable evaluation form
- Multiple evaluation with hierarchical chain
- Progress chart to events
- Deploy in docker
- Notification system
